

ASPKey+™ for Mobile Devices

Field service and sales applications are becoming more common and requirements for hardware becoming more diverse. ASP has developed a utility called **ASPKey+™ for Mobile Devices** that allows you to integrate existing barcode scanners using Bluetooth® and Pocket PC mobile devices such as the iMate®. It does this by converting serial input into a keyboard interface. With a Rugged Bluetooth Barcode scanner like the Denso GT10, you can scan items, which then upload to the mobile device in real time and without the use of cables.
