

ASP QuickStripe

No need to type in the details on a Medicare or Credit Card, just slide the Card through the QuickStripe reading slot. The Card data will appear on your PC screen as though typed in, but without any errors!.

The ASP QuickStripe Magnetic Stripe Reader is quick and easy to install. Although an RS232 interface version is available, the most common interface is PC Keyboard Emulation, so you just plug the unit in between your PC and its keyboard, no power supplies or other cables to worry about. USB interface is now also available, so you can plug straight in to the USB port on your computer.

For those technically inclined, the standard QuickStripe reads either or both of the standard Tracks 1 and 2 on the Card. A version that reads all 3 standard tracks is also available.

QUICKSTRIPE – Quick and Easy Magnetic Stripe Card Reading, and supported by ASP, innovative products and great support since 1977.
