

# Process Assessments & Cheques Quickly and Easily!

## ASP OCR READER 5133

- Significantly Reduces Key Input Time
- Eliminates Input Errors
- Optical technology allows reading MICR (cheques), OCR print, and barcodes **IN THE ONE DEVICE!**
- Automatically Populates your Database
- Speeds Payment Processing
- Programmable
- Keyboard Interface Means No Changes To Software Required
- Low Cost Alternative to Keyboard Data Entry (High ROI)
- Optional Magnetic Stripe Reader
- One Year Warranty

The 5133 Reader may be used with the Geac Pathway system to capture information from rate assessment notices and cheques.

When a person comes in to pay rates or other assessments the operator takes the notice and runs it through the rear slot. The Reader will scan and capture the customer number and brings up the customer screen. The cheque is then passed through the rear slot, and the reader captures the BSB number, the cheque number and other data, and populates the fields on the screen. Keying errors are eliminated.

The Reader can be programmed to suppress characters, add prefix, suffix, preamble, postamble and rearrange the order of the text.

Being an optical reading device the Reader can read OCR characters from a standard laser printed or photocopied form, along with the MICR line on cheques. Optionally the front reading slot can be fitted with a magnetic stripe reader.

Because the 5133 is connected using a keyboard wedge interface the computer thinks everything is coming through the keyboard which means no special connections or software are required.

These Readers are installed throughout Australia in Government Departments, Councils, Libraries, Utilities, Banks, Credit Unions and Commercial Businesses.
