

How Muffin Break Bondi Junction simplified staff attendance tracking for around \$2500*

Staff costs are a major part of your business expenses. Keeping accurate time records is fundamental to a strong bottom line.

But simple systems such as time sheets are notoriously inaccurate and subject to abuse.

Cleo at Muffin Break Bondi wanted a better solution. One that was simple for staff to use, took up very little space, and gave him instant accurate time summaries for passing to payroll.

ASP's Australian designed and built ZipNet™ Terminal and TimeSheet Express™ software for Windows provided the solution.

The ZipNet Terminal is tiny, easily located in a kiosk, displays the time, and can be left on 24/7. Staff simply clock in and out by sliding a barcoded card along the Terminal slot, or touching an IDTag to the front. There's no need for a PC on site, because the ZipNet Terminal includes ASP's Direct Download technology. Touch a special memory chip to the front of the unit and staff times are uploaded into the chip. Take the chip home, slide into a small reader, and the times are automatically transferred to the TimeSheet Express program on your PC for analysis.

TimeSheet Express itself is easy to learn and use. Instant viewing of staff times and totals, data rounding to make visual interpretation faster, colour keyed advice of unexpected totals, a full range of reports, and no shift profiles to define. Optional Export Modules are available to popular payroll programs and services.

Interested in automating your Roster creation and distribution? Consider ASP's Web based service at www.RosterMatic.com, or contact us for more details.

ASP was established in 1977, is Quality Certified and an Australian Government Endorsed Supplier, and prides itself on looking after its clients. Other products include a wide range of barcode scanners, Smartcard solutions, receipt printers and just about anything else when it comes to Data Technology.

- **ZipNet Terminal - simple electronic time clock, no buttons to push, no cards to manually fill in.**
